

# THE COMPLETE WORLD WAR TWO WARGAMES MANUAL 

© 1975-2005
February 2005 release.
Marc G. Glasby
www.wanowandthen.com

## Dedication.

To all the people I have played wargames with (All those I can remember are listed below) and to the lasting friendships which have developed.

Ian Sibert
Mike Kirkwood
Craig
Nick Conway
Chris Mitchell
Ian Swenke
Sven
Chris Pollock
Corey Jones
and many others whose names I have forgotten over the years.
And to Tim Pine who started a wargames group in Rockingham all those years ago and first got me interested in serious wargames.

To the shops which have supplied many of our essential requirements and which have (on occasion) given generous discounts to club members. (Most of these are sadly closed by now.)

Perth Hobby Centre<br>Simulations<br>Rockingham Toyworld<br>Brownes Toys<br>Littlefields Fremantle

And lastly to my wife Rosabelle who has long endured weekend marathons of Waterloo and D-Day in the garage or games room and whose timely snacks have turned defeat into victory.

## INTRODUCTION

I have been a wargames enthusiast for over 20 years, and in all that time I have never found a set of rules which covers all the aspects which wargamers are famous for arguing over.
It was in that regard that this book was written. Although some may not agree that it covers all possible aspects, it will, I think, save many from the more common disagreements that hold games up.
Many of the objective rules have been formulated from a great deal of research. Unfortunately some mean values were used since not all information on vehicle specifications was consistent in different books..

Other rules, where specific information was not available, were made using approximations Use the subjective rules only when agreement cannot be reached. I hope the rules contained herein will provide many enjoyable hours of games for all.

## ACKNOWLEDGMENTS

Bruce Quarrie. For his magnificent series of wargaming books which inspired me to write this manual.

Donald Featherstone. For the same reason.
I recommend the Tank Battles in Miniature series to anyone interested in WWII wargames.

Note: These rules were initially written with $1 / 72^{\text {nd }} \& 1 / 76^{\text {th }}$ scale miniatures in mind but they are slowly being adapted to $1 / 300^{\text {th }}$ scale as this provides a relatively larger playing area.

## PREPARATION.

To begin with you will need a large flat board, preferably larger than an ordinary table, although that will do if you have nothing else. (Experience has taught me that the floor is definitely out.) The ideal board is about the size of a table tennis table. The best answer seems to be two or three large chip board pieces which can be used for one large table or two to three smaller ones. I do not suggest that you attach permanent displays to the boards as that will limit the different setups of hills and buildings that can be achieved.

To get the effect of a hilly terrain, it may be best to cover piles of magazines with a cloth. If at all possible, get a green or brown cloth of your own (mothers and wives don't appreciate the stains left on table cloths by spilt drinks and the dye from bushes).

Next is the question of setting up the board. Here you will see the reason for having a table of your own. In the midst of a seaborne invasion or a brilliant counter attack, dinner will almost certainly be served. Unless you have a table other than the dining table, the battle will surely be postponed indefinitely.

If you have a spare room, an unused garage, a garden shed, make the most of what they have to offer. If you have children or younger brothers (or dogs with long legs), lock the room containing your table and models so no harm can befall them.

Most types of scenery can be purchased from specialised model stores at fairly reasonable prices. The best range of scenery, models, and accessories (in Perth W.A.) are available from the Perth Hobby Centre in Murray St. or Valhalla on Wellington St. Readers from other countries will certainly know the stores in their locality.

If you do not want (or cannot afford to buy) ready made bushes, buildings, and bridges, I would advise you to read some books on modelling which give details on building construction and scenery layouts.
Other items you will need to operate these rules include, at least one retractable tape measure per player, two six sided dice (2xd6), two percentage dice (2xd10) and one twelve sided die. (1d12), one 4 sided die and one 8 sided die.
Now you should be ready to select the men and vehicles for the battle. Remember not to overload your board as the game will become bogged down and many areas of detail forgotten. Usually the attacker will have an advantage in man and vehicle power, and the defender should have a slight advantage in field gun support (Not artillery).

When you construct your vehicles, it may be a good idea to reinforce areas that are prone to excessive handling. Don't bother with details like aerials and lights as they are the first to go.

Cannon and machine guns will also suffer a great deal of damage but are essential to the realism of the model.

If you have only just begun to play wargames, you may find some of the detail in this book a little tiresome. Therefore use the major rules and familiarise yourself with the procedures of firing and movement first, then move on to the sections on visibility and points values at a later stage.

## THE UMPIRE

It is desirable that at least 3 people play each game. Two will be opposing players, and the third will act as an umpire "GOD". The umpire is responsible for setting up the game board, allocating the forces for each side, determining weather, and deciding outcomes. This avoids many of the conflicts over who can shoot whom.
The ideal wargame consists of five or more people:
1 - The umpire \& message bearer
2 \& 3 - The supreme commanders in a separate room.
$4 \& 5$ etc. - The field commanders who move figures and make local decisions.

It's a bit boring for the supreme commanders at times but it is the ultimate in realism.

## FIRE \& MOVEMENT SEQUENCE

If you want to get to know these rules quickly, I suggest that you set up a board complete with men and vehicles and run through the rules as they appear. (Don't try to fight a complete battle, instead, test the rules as they appear and set vehicles and men in positions so that you can test the rules under different conditions.)

Firstly, movement is not divided into sections (as fire is), except, where tanks are firing on each other or where anti tank/tank duel takes place (then each moving vehicle fires one round moves a third, fires again, moves a third etc.). You and your opponent(s) will move all vehicles and men at the same time. Firing is not quite so simple.

There are three segments of a move in determining cannon fire results.. This was the only way I have found of avoiding the unrealistic situation of one player winning a dice roll and firing all shots off at once. (This does not apply to cannons that are firing for the first time and are hidden from the target.)

The player who fires first is determined by each player rolling one six sided die. The player with the highest number can decide who has first fire. (He may not always elect to fire first, especially if he has a camouflaged anti tank gun ready to fire and it is directly in front of an oncoming tank. (If he fires second, the opponent loses the opportunity of his first shot.) If the dice roll is a draw, they must roll again.

Before you start firing, check the following items;
1 -The distance between the gun and the target at the start of the move.
2 - The effective range of the gun. (If you fire too early and do not destroy the target, the element of surprise is lost and the gun and crew are placed at grave risk.
3 - The visibility. (You can see all things at all times on the games board, the gunners can not.)

Once the gun is in range and the target is visible, fire can begin. (Target identification should also be taken into account.)

Fire segments are broken into three rounds because the majority of main cannons had a fire rate of six rounds per minute (rpm)., As each move is presumed to be thirty seconds long, this breaks down easily into three separate segments.

If a gun can only fire 2 rpm , then it can only fire in the LAST fire segment. If it can fire 4 rpm , it can fire in the second and last segments. If it can fire 6 rpm , it has one shot in each segment. If 8 rpm , then a single shot in the first and second and two shots in the last segment. If 10 rpm , then a single shot in the first and two shots in the second and last segments. If 12 rpm , then 2 shots in each segment. Basically, you will find that guns fired $6 \mathrm{rpm}, 8 \mathrm{rpm}$, and 12 rpm .

These rules only apply when the vehicle is stationary. If either the target or the firer is moving (depending on the speeds and terrain) one or more shots may be lost. In some cases, you may decide to fire in one move, only to find that you cannot actually send a shot until the following move.

You must always remember that each move is broken up into two halves. The first is the fire segments and the second is movement. Since you fire first, you must take into account moving targets, ranges, and 'hitability' (being able to range in on a target). These will alter according to the direction the target (and the firer) are moving and obstacles that may get in the way of a shot.

REDUCTIONS IN VEHICLE MOVEMENT

| OBSTACLE / CONDITION | REDUCTION | VEHICLE TYPE |
| :---: | :---: | :---: |
| THROUGH BUSHES | -50\% | A |
| REVERSING | SEE MISC |  |

| SAND DUNES | -25\% | W |
| TOWING A GUN | -30\% | W |

## CODES = A - ALL T-TRACKED H-HALF TRACK W - WHEELED

FOR FOUR WHEEL DRIVE ADD 10\%
So far we have only discussed main armament (cannon) fire. Infantry are not subject to the same fire segments. Each side fires all infantry weapons at one time. The
survivors will be able to return fire. Even those killed by the first round of fire in a move, will be able to return fire at a reduced rate. (Allowing for a certain amount of spontaneous fire.)
Since this chapter covers only movement and firing sequence, we have not looked at the mechanics of how fire takes place. This will be covered under two separate chapters dealing with tank and anti tank fire, and infantry fire.
It was general practice for tanks to use their secondary armament against infantry in the open and use HE shells against those in buildings.

One area involved with movement that should be considered is the combat readiness of both vehicles and men. Not all vehicles were manned at all times, and infantry had to take some time out to sleep. You should, at the beginning of the game, decide which vehicles are unmanned, which have their crews nearby, which are manned etc. Also decide which infantry groups are dressed, armed, asleep etc. The following table shows the number of moves taken for such groups to be combat ready.

## COMBAT READINESS

| CONDITION | MOVES TO BE COMBAT READY |
| :---: | :---: |
| VEHICLES |  |
| UNMANNED CREW ASLEEP | 6 |
| UNMANNED CREW AWAKE | 4 |
| UNMANNED CREW WORKING ON VEHICLE | 2 |
| INFANTRY |  |
| ASLEEP | 5 |
| AWAKE BUT UNREADY | 3 |

Starting engines (6 sided die)
Spring/Summer 1 does not start
Winter/Autumn 1,2 does not start
If an engine does not start after 5 attempts, then a crewman must be assigned to check the engine over taking 2 moves before the engine may be restarted.
The last area to consider is the situation in which vehicles run over infantry. (Either deliberately or by accident.)
If a group of infantry is in the path of a tank and are unable to get out of the way, a die must be rolled for each man to determine whether he managed to dodge out of the way in time. A roll of 1,3, or 6 means he survives.

Example of fire \& movement sequence. Both players roll to see who fires first (1D6).
All infantry from the winner of the roll fire full rate.
All artillery \& mortar fire is conducted for both sides.
One third of field gun and tank fire is done for the winner.
One third of field gun and tank fire is done for the other side.
One third movement is done for all mobile vehicles.
All surviving infantry from the other side fire full rate and all infantry killed fire half rate.
One third of field gun and tank fire is done for the winner's surviving vehicles.
One third of field gun and tank fire is done for the other side's surviving vehicles.
One third movement is done for all mobile vehicles.
One third of field gun and tank fire is done for the winner's surviving vehicles.
One third of field gun and tank fire is done for the other side's surviving vehicles.
One third movement is done for all mobile vehicles.
All infantry movement is done.
(See notes at the end of this guide)
Remember FIRE is done BEFORE movement and all mobile vehicles must adjust ranges accordingly. This fire and movement sequence is a little complex but it attempts to simulate reality where vehicles move and fire at differing ranges. A turn based system is the only way to run a wargame but it isn't all that realistic.

## AFV \& AT FIRE

## VISIBILITY AND IDENTIFICATION.

This section deals with the ability of a tank or anti tank crew to locate, and identify a target as hostile. Visibility will depend on;
1 -the weather
2 -the terrain
3 -position of the observer
4 -whether the observer has visual aids
5 -which direction the observer is looking
The Visibility Table gives information on how far an observer can see under different conditions. There is also a Sound Location Table and a table to determine whether an observer can identify a target as hostile. (You would do well to remember that more than one tank was destroyed by its own forces due to faulty identification.)

Remember the Visibility Table will only tell you if there are men and vehicles about. You must use the Identification Table to decide whether they are the enemy or not.

VISIBILITY TABLE

| Looking at | Range |
| :---: | :---: |
| 1-5 men | 500 |
| 6-10 men | 600 |
| 11-20 men | 800 |
| 21-30 men | 900 |
| 31-40 men | 950 |
| more than 40 | 1050 |
| 1 vehicle | 600 |
| 2-5 vehicles | 800 |
| 6-10 vehicles | 1000 |
| 11-15 vehicles | 1500 |
| more than 15 | 2000 |

THE VISIBILITY TABLE ASSUMES ALL MEN ARE STATIONARY.

## VISIBILITY ADDITIONS \& DEDUCTIONS

TARGET IDENTIFICATION

## IDENTIFICATION OF TARGETS

OBSERVER

| TARGET | F.O.O. | N.C.O. | INEXPERIENCED |
| :--- | :---: | :---: | :---: |
| 1-10 MEN | $30 \%$ | $30 \%$ | $25 \%$ |
| 11-40 MEN | $45 \%$ | $40 \%$ | $35 \%$ |
| 40 MEN | $55 \%$ | $50 \%$ | $45 \%$ |
| 1 VEHICLE | $50 \%$ | $45 \%$ | $35 \%$ |
| $2-5$ VEHICLES | $60 \%$ | $55 \%$ | $45 \%$ |
| $6<$ VEHICLES | $70 \%$ | $65 \%$ | $55 \%$ |

This table is used when units are seen. It only applies to units over 300 mm away.
Targets under 300 mm are automatically identified.

IDENTIFICATION +/-

| DEDUCTIONS \& ADDITIONS |  |
| :--- | ---: |
| TARGET STATIONARY | $+15 \%$ |
| TARGET IN COVER | $-20 \%$ |
| $100-200 \mathrm{~mm}$ | $-10 \%$ |
| $\mathbf{2 0 1 - 4 0 0 ~ m m ~}$ | $-20 \%$ |
| $\mathbf{4 0 1 - 6 0 0 ~ m m}$ | $-30 \%$ |
| $\mathbf{6 0 0}<$ | $-40 \%$ |

NOTE - This table should only be used when circumstances demand.
IDENTIFYING SOUNDS

| SOUND | SHOUTS | SMALL ARMS | CANON | ENGINES |
| :---: | :---: | :---: | :---: | :---: |
| (COVERING) SHOUTS SMALL ARMS CANNON FIRE ENGINES NO SOUND |  |  |  |  |
|  | - | 550 | 1500 | 1300 |
|  | 250 | - | 1300 | 1100 |
|  | 100 | 350 | - | 900 |
|  | 175 | 350 | 700 | - |
|  | 350 | 700 | 2000 | 1500 |

How to use this table :
The Sound Identification Table allows troops to determine whether weapons fire or engines can be heard at a distance.
For example, if a tank commander is listening (in a tank with its engine off) for sounds of other vehicles, he would be classed as listening for vehicle engines. If there were no other sounds about the vehicle, engines could be heard at a range of 1500 yards (mm). If small arms fire was going on in the immediate locale, then the range would be reduced to 1100 yards. Although sounds could be heard at far greater distances than those given the distances, in this case, they are given to indicate that the direction the sound comes from can be given with more precision.

## TANK \& ANTI-TANK RANGING TABLES

You will remember that at the start of Chapter One, we looked at fire segments and the effect they have on the game. These will be used exclusively in tank/anti-tank fire.
To begin with, measure the distance between the target and the gun which will fire. Next, check the range and penetration rates for the gun. Now apply the following procedure:

First, use the Ranging Tables to determine whether the shot(s) hit the target. (Use the Fall of Shot Table for those shots which missed.) Always remember to check the target's armour (adding any appropriate amounts for added protection, ie. sandbags, tracks, spaced armour etc.,) and check the penetration amount at the measured range. If penetration cannot occur then the shot is nullified.

INFANTRY FIRE SUPPRESSION
FIRE SUPPRESSION

| Small <br> HE fire | Hard cover | Medium cover | Soft cover | No cover |
| :--- | :---: | :---: | :---: | :---: |
|  | $-20 \%$ | $-40 \%$ | $-60 \%$ | $-80 \%$ |
|  | $-25 \%$ | $-50 \%$ | $-75 \%$ | $-100 \%$ |

## VEHICLE FIRE SUPPRESSION

AFVs are suppressed when hit by shell fire. The results are as follows:

| Gun size | Movement Deduction | Fire <br> Deduction |
| :---: | :---: | :---: |
| $15-47 \mathrm{~mm}$ | 10\% | 15\% |
| $48-75 \mathrm{~mm}$ | 20\% | 25\% |
| $76-105 \mathrm{~mm}$ | 30\% | 35\% |
| $>105 \mathrm{~mm}$ | 40\% | 66\% |

DEDUCTIONS FROM RATE OF FIRE FOR VEHICLES

| GROUND | SPEED |  |  |  |  |  |  |
| :--- | :---: | ---: | ---: | ---: | ---: | :---: | :---: |
|  | $\mathbf{0 - 1 0}$ | $\mathbf{1 1 - 2 0}$ | $\mathbf{2 1 - 3 0}$ | $\mathbf{3 1 - 4 0}$ | $\mathbf{4 1 <}$ |  |  |
| Flat | 0 | -1 | -2 | -3 | -4 |  |  |
| Bumpy | -1 | -2 | -3 | -4 | -5 |  |  |
| Rough | -2 | -3 | -4 | -5 | -6 |  |  |

The degree of traverse will also effect the number of shots which can be fired as shown below;

| Degree of traverse | Deduction from rate of <br> fire |
| :--- | :---: |
| $\mathbf{0 - 2 0}$ degrees | 0 |
| $\mathbf{2 1 - 3 0}$ degrees | -1 |
| $\mathbf{3 1 - 4 0}$ degrees | -2 |
| $\mathbf{4 1 - 5 0}$ degrees | -3 |
| $\mathbf{5 1 - 6 0}$ degrees | -4 |
| degrees | -5 |

ADDED PROTECTION FOR VEHICLES.
ADDED PROTECTION

| i) Track |  |
| :--- | :---: |
| ii) Sandbags <br> iii) Concrete <br> iv) other equipment | 5 mm |
|  | 10 mm |
|  | 10 mm |
|  | 2 mm |

For shots failing to hit a specific target, use the Undirected Fall of Shot Table (see Artillery Rules) to see which path the shell will take.

### 7.1 ANGLE OF STRIKE

The angle of hit may detract from the shot's ability to penetrate the armour. Use the following table to decide what effect this will have on any shots hitting a vehicle.

| Armour |
| :--- |
| Slope |

Check the target's armour slope and the angle of hit. The corresponding number in the above table gives the number of mm's to deduct from maximum armour penetration at the appropriate range.

ALLIED WEAPONS TABLE

- NOTE : . 5 means one shot every two moves.

The tables on the following pages give the armour penetration rates for all major types of cannons. Both the Allied and Axis Weapons Tables given above and the Armour Penetration Tables must be consulted to determine the weapon's range, firing and the possibility of destroying the target.
In the following Penetration Tables, you may dispute some of the penetration figures as being too low. Although I admit that penetration increased with the use of tungsten shot, it was not always available and was particularly scarce in Germany at the end of the war. Also, these figures represent penetration of 30 degree sloped armour. Shot striking 90 degree flat plate would also have a greater effect.

Players may consult Weapons Range Tables before a shot is taken but they MUST NOT be allowed to consult penetration tables until the shot has been confirmed.

K - KWK / P - PAK / F- FLAK / (*) - heavy anti tank
L - is a measure of a gun's calibre. The higher the number the longer the barrel. If you are not sure which weapon a particular AFV carries, then the length of the barrel will give some indication.

The figures given in these tables have been taken from ranges of 500 yds and 1000 yds at 30 degree slope of armour. All other figures are estimates from these two figures. Where figures are unavailable use another weapons figures with similar characteristics. le. For 47 mm m 1 use figures for $50 \mathrm{~mm} \mathrm{I} / 60$.

## \% DEDUCTION FOR SPEED,

Target speed

|  | MMs | 120 | 240 | 360 | 480 | 600 | 720 | 840 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Firer speed | MPH | 10 | 20 | 30 | 40 | 50 | 60 | 70 |
|  | 10 | 10 | 14 | 18 | 23 | 27 | 34 | 40 |
|  | 20 | 20 | 23 | 27 | 31 | 35 | 39 | 44 |
|  | 30 | 30 | 33 | 35 | 40 | 45 | 50 | 55 |
|  | 40 | 40 | 45 | 50 | 55 | 60 | 65 | 70 |
|  | 50 | 50 | 55 | 60 | 65 | 70 | 75 | 80 |
|  | 60 | 60 | 65 | 70 | 75 | 80 | 85 | 90 |
|  | 70 | 70 | 75 | 80 | 85 | 90 | 95 | - |

The apparent area of a target is based on the SINE of the strike angle multiplied by the exposed area of the vehicle. For example, if you were firing at 45 degrees to the side of a vehicle, it would be possible to hit part of the front/rear or side. Find the vehicle's height $x$ length $x$ the SINE of the strike angle plus the height $x$ width $x$ the sine of the angle of strike. This will give the apparent visible area. (You will need a calculator).

If both firer and target remain stationary, add $5 \%$ for each shot fired after the first shot. Once you have determined that a ranging shot is successful you must the find the area of the vehicle that has been struck by the shell. It should be apparent whether you have hit the front or rear. You then need to roll dice to find the exact area struck.

When a vehicle is hull-down you reduce the apparent area. If a ranging shot is achieved, then the exposed area of the vehicle is hit and the AREA OF HIT TABLE may be disregarded. If a vehicle is moving through woods or across a bridge and it is partly obscured by trees or girders, then deduct $5 \%$ for each 5 mph the vehicle is travelling and then add $40 \%$. Deduct this figure from 100. Roll \% dice, and if the number is less than the remainder \%, then a hit was scored. (See Notes on last page)

## EFFECT OF STRIKE

Use the appropriate Vehicle Damage Table and roll dice as follows.

| TARGET | Armour | Semi | Soft |
| :---: | :---: | :---: | :---: |
| GUN TYPE |  | Armour | Skinned |
| Light A.T. 0-37mm Medium A.T. $\mathbf{3 8 - 7 5 m m}$ Heavy A.T. 76 mm < Mortar Artillery 75-105 Artillery 106 < | 1 (10) | 2 (10) | 3 (10) |
|  | 2 (10) | 3 (10) | 4 (10) |
|  | 3 (10) | 4 (10) | 5 (10) |
|  | 1 ( 4) | 1 (6) | 1 (8) |
|  | 1 ( 8) | 2 (8) | 3 (8) |
|  | 2 (8) | 3 (8) | 4 (8) |

The table above shows how many effect dice to use for effect of hit. ie. 3(8) = roll 3 eight sided dice and add the numbers on each dice. The resulting number is the number of boxes marked off on the damage sheet.

CRITICAL HITS

| DIE | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ |
| ---: | ---: | :---: | ---: | ---: | ---: |
| 4 | $1 / 4$ | $2 / 8$ | $3 / 12$ | $4 / 16$ | $5 / 20$ |
| 6 | $1 / 6$ | $2 / 12$ | $3 / 18$ | $4 / 24$ | $5 / 30$ |
| 8 | $1 / 8$ | $2 / 16$ | $3 / 24$ | $4 / 32$ | $5 / 40$ |
| 10 | $1 / 10$ | $2 / 20$ | $3 / 30$ | $4 / 40$ | $5 / 50$ |
| 12 | $1 / 12$ | $2 / 24$ | $3 / 36$ | $4 / 48$ | $5 / 60$ |

The table above shows when a hit which has penetrated the hull becomes critical and brews up a vehicle. ie. When rolling 5 eight sided dice, the following rolls will brew
the vehicle up: $5,8,16,24,32,40$ (The first figure in each column is included only for the applicable number of dice rolled.) This must always be a roll of all 1 s . All other numbers can be made up of any sequence of dice.

If a driver is killed by shell or small arms fire, the vehicle will not just stop on the spot. It will, in most cases, continue on for some distance and will stray either to the left or right. This could run it into a ditch, wall, or even vehicles passing by.

To determine which way the vehicle will slew, roll a six sided die. A roll of 1,2, or 3 will send it to the right, a roll of 4,5 , or 6 . will send it to the left.

The distance a vehicle will travel depends on its speed. For the sake of convenience, we will say that it will travel half the distance it travelled the previous move. ie. If it travelled 220 mm in the previous move, then it will travel 110 mm in the move the driver was killed.

DEGREE OF SLEW

| CONDITION | SPEED |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0-10 | 11-20 | 21-30 | 31-40 | 40< |
| Turning a corner | 5 | 10 | 15 | 20 | 25 |
| Bumpy ground | 5 | 10 | 15 | 20 | 25 |
| Up a hill | -5 | -5 | -10 | -10 | -10 |
| Down a hill | 5 | 5 | 10 | 10 | 10 |
| Lost front wheel | 10 | 15 | 20 | 25 | 30 |
| lost rear wheel | 5 | 7 | 12 | 15 | 17 |
| Track lost | 10 | 15 | 20 | 25 | 30 |
| HE hit on side | 10 | 20 | 30 | 40 | 50 |

If a vehicle moving at 25 mph , had lost a front wheel and was hit in the side by an H.E. shell the degree of slew would be 50 degrees.

So far we have looked at Tank vs. Tank and Anti tank vs. Tank. The next step is to look at Tank vs. Anti tank.

Anti tank weapons were usually well concealed, and many were dug in, placed behind walls or in pill boxes. In the case of emplaced or protected guns the protection had to be removed before any damage could be done to the gun or crew. This section deals with direct fire from A.F.Vs. and does not cover fire laid down by artillery.

Direct fire from AFVs against buildings. Range in using the same method as for artillery (described later).

## DIRECT AFV FIRE

If an AFV is firing at a target hidden in bushes or in buildings the player controlling the AFV must estimate the distance from the base of the board (C) to the target, and from the edge of the board ( $D$ ) to the target (B). Where these lines intersect is the point at which the shot lands (A-B). This applies to AFVs who cannot directly see their targets, but if the target is in view the targeting is done in the normal manner.

## HIGH EXPOLSIVE DAMAGE TO STRUCTURES

At the end of this manual you will find various damage sheets for gun emplacements, pill boxes, buildings and bridges. Each of these structures has a surrounding coat of boxes. The table below shows the number and type of dice to roll to block out these protective boxes. Once high explosive fire breaks through this protective layer, the occupants roll under the ARTILLERY vs INFANTRY table which is found under the chapter on Artillery Fire.
H.E. DAMAGE TO BUILDINGS

| Gun type | Wood |  | Earth | Brick | Steel | Stone |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | \(\left.\begin{array}{c}Concret <br>

e\end{array}\right]\)

The number rolled is the number of boxes blanked out on the appropriate structure damage sheet.

You will find, that, in many cases, once a tank crew had located a field gun, the field gun would be withdrawn to another position. This was true for most anti tank guns, except, the German 88 mm . The ' 88 ' was a fearsome weapon. There
are stories of 88 s knocking out allied tanks at ranges of over 3000 yards, and a single shell passing through more than one tank. In fact, it has been claimed, that the reputation of the 88 was such, that some tank crews would bail out if the 88 's first shot did no damage.

Field guns above 50 mm cannot be moved by their crews. Guns below 50 mm can be wheeled along at 10 mm per move by 3 men.

The question now arises how a tank crew can locate an enemy weapon that has been carefully concealed. During the first move in which an anti tank gun fires, the crew of an AFV would be unaware of the location of the gun. Unless the AFV is actually hit. If a tank is hit and left undamaged, then the crew would have a fair idea where the shot had come from. If the tank is buttoned, it is much harder to find an attacking weapon than it would be if the commander was watching from the turret.

If an anti tank gun is concealed and only fires one shot then it is most unlikely that the position would be discovered. All these factors have to be taken into account when determining whether an AFV can return the fire of an anti tank gun.

The following table deals with most of these areas.

## SPOTTING GUNFIRE

Range

| Weapon | $\mathbf{0 0 0}$ | $\mathbf{1 0 0}$ | $\mathbf{2 0 0}$ | $\mathbf{3 0 0}$ | $\mathbf{4 0 0}$ | $\mathbf{5 0 0}$ | $\mathbf{6 0 0}$ | $\mathbf{7 0 0}$ | $\mathbf{8 0 0}$ | $\mathbf{9 0 0}$ | $\mathbf{1 0 0 0}$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | ---: | ---: |
| Small arms | 50 | 40 | 30 | 20 | 10 | 5 | 0 | -5 | -10 | -15 |  |
| Infantry A.T. | 60 | 50 | 40 | 30 | 20 | 10 | 5 | 0 | -5 | -10 |  |
| Mortar <br> Anti-tank <br> Artillery <br> Tank fire | 65 | 55 | 45 | 35 | 25 | 15 | 5 | 0 | -5 | -7 |  |
|  | 70 | 60 | 50 | 40 | 30 | 20 | 10 | 5 | 0 | -5 |  |

|  | 90 | 80 | 70 | 60 | 50 | 40 | 30 | 20 | 10 | 5 |  |

\% chance of spotting gunfire

## H.E. FIRE

Direct (as opposed to artillery) high explosive blast patterns will be different than indirect fire. Artillery blast areas are round. Direct fire blast areas are triangular. Eg.

## ARTILLERY \& RADIOS

In this chapter we will look at both the effects of artillery fire and the influence of radios.

The reason we have not looked at radio contact in any previous chapter is that most vehicles were equipped with internal, short range, and long range sets. The internal and short range sets would be tested and a radio net would have been set up before the battle began. Because artillery guns are some distance from the front line, their only means of directing fire was to have a F.O.O. (forward observation officer) at the front line. The F.O.O. would call down the fire and give corrections as the shots fell. All this would have to be carried out over a radio.

Although artillery was a major factor in the outcome of large battles, it was rarely used for small engagements such as those you will fight on a wargames board. If you only use a handful of men and vehicles, then it is unrealistic to expect support from a battery of artillery pieces. Also because the size of a playing board will be limited, I would suggest that all artillery fire be restricted to ranges of over 700 mm . Of course, if a battery is under attack, then they would use direct fire (the same method as tank - anti tank fire.)

If you decide to use artillery, then you must decide at the beginning of the game how many guns are available. If a general offensive is in progress, then the artillery will be switching targets and will not always be available when it is needed.

To receive artillery support, you must first establish radio contact with HQ to get permission. You must also have a F.O.O. in the area to direct fire. (Artillery fire without direction is hazardous as the gunners are firing blind.)

To establish radio contact roll a six sided die, if you roll a 2,4 , or 6 , then radio contact has been made. (Remember that the radio sets used in WWII lacked the sophistication and reliability of modern sets, and the fact that they were in combat made matters worse.) Once you have made contact with HQ you must consult the following table to determine the number of moves before the guns will be available.

## RADIO INTERCEPTION

Specialised radio interception equipment MUST be available to attempt this. (Points value 200). Messages transmitted may be true or false but must be written and given to the umpire. If radio detection equipment is available, then the umpire must decide whether false messages are passed on. A roll of 10 on a 1D10 will intercept the message.

## ARTILLERY AVAILABILITY

Number of Moves before artillery becomes available

| Guns | F.O.O. | no F.O.O. | \% availability |
| :--- | :---: | :---: | :---: |
| $\mathbf{1 - 2}$ | 6 | 10 | 45 |
| $3-4$ | 8 | 14 | 35 |
| $\mathbf{5}-6$ | 10 | 16 | 25 |
| $\mathbf{7}$ | 12 | 18 | 10 |

Once radio contact has been made roll \% dice to determine whether the artillery is available. If it is not, you must break radio contact and try again in three moves. If it is available, you must wait the given number of moves before it can start to fire. You will notice that if you do not have a F.O.O. present, the request receives a low priority. Also the fewer guns you require the higher the \% chance of getting support.

When a F.O.O. is present, the artillery fire may be directed at specific targets. Make sure that the F.O.O. can actually see what he is directing fire against. To begin with, the artillery may fire one shot per gun every two moves. (ie.. If you have two guns, they may fire one shot each, wait a move, and then fire again.) Once the F.O.O. reports the target has been hit, then the guns may open fire at full rate. Until the target is hit the F.O.O. relays new fire coordinates each time he spots a fall of shot, then the guns fire again.

The player firing artillery gives 2 coordinates based on an estimate of where the shot will land. The coordinates are measured from one end of the playing surface and from one side as well. The player whose units are being fired on will measure up and across the board, then place a marker where the lines intersect.

It is important not to allow the player firing artillery to make the measurements as this will unduly increase his accuracy in the following rounds of fire. Use the following table to determine actual fall of shot.

### 8.1 FALL OF SHOT

## FOO fall of shot table.

|  | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |
| 6 |  |  |  |  |  |  |

Mark this out on a clear plastic sheet and place it over a target once the ranging measurements have been made. Roll 2d6 to find the actual fall of shot, and then apply the appropriate blast circle for the gun firing.

Each square in this sheet should be approximately $2.5 \times 2.5 \mathrm{~cm}$. For fall of shot when no FOO is used, design a similar table but make the area $12 \times 12$ squares and roll 12 sided dice to determine fall of shot. This simulates the greater accuracy when a F.O.O. is available.

To determine where a shot will fall, follow the procedure outlined below;

1) For guns on the board:

Estimate the distance to the target by giving the range in mm's up the board ( 0 degrees to the gun) and then the range in mm's across the board (90 degrees to the gun.)
2) For guns off the board:
(Artillery were long range weapons and do not actually need to be on the playing board.) Mark a point at the edge of the board behind your lines and then use the same method as above.

For off- board guns, it takes two moves from the time artillery markers are placed until the shell lands. One move for on board guns and mortars.

Although the estimated distance is measured up and across the board, the actual shot goes direct from the gun to the target.

Once the estimates have been made the opposing player measures out the distances and places a marker where the shot would have fallen. If you have a F.O.O. present, you now place a F.O.O fall of shot table over the target and roll 2 six sided die to determine the actual fall of shot.

If there is no F.O.O. present, you must use a fall of undirected shot sheet. (See above)

Once the shot has been placed, a blast sheet is used to determine the area effected. After the first estimate the blast sheet is moved 100mm left, right, up or down (firing player's choice) as the area is blanketed by barrage fire.

## COUNTER BATTERY FIRE

Sound \& flash ranging was used to detect enemy artillery fire. This was not as accurate as later radar methods but was the only method available through most of the war.

$$
\begin{array}{crc}
0-5 \mathrm{~km} & 6-10 \mathrm{~km} & 11-20 \mathrm{~km} \\
15 \% & 10 \% & 5 \%
\end{array}
$$

Each shot fired by the target battery $+2 \%$
Target using rockets $+10 \%$
Target using mortars -5\%
Target is camouflaged -5\%
ARTILLERY PIECE TABLE

| Gun | Range | RPM | Blast | Country | Elevation | Calibre | Traverse |

| 7.2 in V | 15453 | 2 | 90 | UK | $0+45$ | 183 mm | 8 |
| 7.2 in VI | 17984 | 2 | 90 | UK | -2 +65 | 183 mm | 60 |
| 8 in M1 | 16596 | 1 | 100 | USA | -2 +65 | 203 mm | 60 |
| 25 pdr | 1816 | 3 | 44 | UK |  |  |  |
| 152 mm | 17265 | 2 | 76 | USSR | $-2+65$ | $\begin{aligned} & \hline 58 \\ & \text { (gun) } \end{aligned}$ |  |
| 152 mm | 12400 | 2 | 76 | USSR | $-3+63$ | $\begin{gathered} 35 \\ \text { (how) } \\ \hline \end{gathered}$ |  |
| 203mm | 18025 | 1 | 101 | USSR | $0+60$ |  | 8 |

Now that we've got artillery support and decided where the shots have landed on the board, we must go on to look at what effect the shots have when they fall on infantry, vehicles and buildings.

## ARTILLERY FIRE ON INFANTRY

## 8.2

Infantry is

|  | 12-37 | 38-57 | 58-90 | 91-128 | 129< |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Enclosed | 10 | 8 | 6 | 4 | 2 |
| Grouped/open | 15 | 11 | 9 | 4 | 4 |
| Grouped/bush | 20 | 15 | 11 | 8 | 6 |
| Spread/open | 25 | 20 | 15 | 11 | 8 |
| Spread/bush | 35 | 30 | 20 | 15 | 10 |
| Trenches | 50 | 40 | 30 | 20 | 15 |
| Fox hole | 65 | 60 | 55 | 40 | 30 |
| In Buildings | 40 | 35 | 30 | 25 | 20 |
| Bunker | 70 | 65 | 60 | 55 | 50 |

\% change of infantry survival
Use the \% dice to determine how many men survived from those that were caught in the damaged area. A \% dice roll is made for each man caught in the blast area.

The other targets for artillery fire are vehicles. The effect of fire in this case depended on the calibre of the gun and the type of vehicle that was hit. Artillery or HE fire has the same effect at 100 yards as it does at 1000 yards because the explosive charge does the damage. This is not effected by range as are armour piercing shots.

For artillery fire on vehicles, consult the section in anti tank fire for effect and use the Fall of Shot Sheet to determine if a vehicle has received a hit.

You also have the situation of near misses by artillery. The table below shows the effect of these shots.

## NEAR MISSES FROM H.E.

A near miss occurs when a vehicle is caught in a blast circle but is not directly struck by the shell.

| Gun size | Armour | Semi Arm | Soft Skinned |
| :--- | :---: | :---: | :---: |
| $15-47 \mathrm{~mm}$ | 1 d 4 | 1 d 6 | 1 d 8 |
| $\mathbf{4 8 - 7 5 \mathrm { mm }}$$76-105 \mathrm{~mm}$ <br> $106-155 \mathrm{~mm}$ <br>  | 1 d 6 | 1 mm 8 | 1 d 10 |
| $<$ | 1 d 8 | 1 d 10 | 1 d 12 |
|  | 1 d 10 | 1 d 12 | 2 d 8 |

Once again damage is recorded on the Vehicle Damage Sheet by blocking off boxes to indicate the area effected.

Another type of fire which could have similar consequences to artillery fire is rocket fire.

Although this was not accurate, it was employed by both Allied and Axis forces. Use the same method for rocket fire (ground based rocket fire) as Artillery Fire without a F.O.O.

ROCKETS.
(Velocity data is included for reference only.)

| Type | Weight | Blast | Velocity | Damage | Range | Nationalit y |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 15 cm | 70 lbs | 75 | 1120 fps | 2d8 | 7715 yds | Ger |
| 21 cm | 241 lbs | 105 | 1050 fps | 6d10 | 8585 yds | Ger |
| $\begin{aligned} & 28 \mathrm{~cm} \\ & 181 \text { Ihe } \end{aligned}$ |  | 140 |  | 6d6 | 2337 yds | Ger |
| 32 cm | 174 lbs | 160 |  | 6d4 | 2217 yds | Ger |
| 30 cm | 277 lbs | 150 | 754 fps | 6d12 | 4975 yds | Ger |
| 20 cm | 44 lbs | 100 |  | 2d6 |  | Jap |
| 82mm | 17 lbs | 41 | 1033 fps | 1 d 10 | 6450 yds | USSR |
| 132 mm | 93 lbs | 66 | 1165 fps | 2d10 | 9295 yds | USSR |
| 300 mm | 201 lbs | 150 | 836 fps | 6d8 |  | USSR |
| 4.5 inch | 38 lbs | 100 | 850 fps | 2d6 | 4600 yds | USA |
| 2inch | 10 lbs | 25 | 1500 fps | 1d10 |  | UK |
| 3inch | 54 lbs | 35 | 1500 fps | 2d6 | 4070 yds | UK |
| LILO | 39 lbs | 100 |  | 2d6 |  | UK |
| LILO | 78 lbs | 75 |  | 2d8 |  | UK |
| LandMatt | 67 lbs | 75 | 1100 fps | 2d8 | 7900 yds | UK |

As a final note, these are the \% chances of setting fire to different types of buildings.

Thatch 70\% Wood 50\% Brick 30\% Stone 20\% Concrete 10\%
NOTE : You will note that in these rules casualties are always referred to as killed not wounded. This is unrealistic as most hits caused wounds are not necessarily fatal. This method is employed for ease of use. At one time these rules contained tables with areas of hit for infantry similar to the ones applied to vehicles. This was far too detailed for a reasonably quick game, but you could always add your own tables if you wanted to go into great depth. As it stands, a hit means an infantry man is out of action and should be removed from the board.

## INFANTRY FIRE \& MOVEMENT

Unlike cannon fire, small arms fire is done in one fire segment. If one side gets first fire and kills a section of infantry, the dead soldiers are given return fire at a reduced rate of $50 \%$. This allows for some amount of spontaneous return fire.

Like cannon fire, small arms fire is limited to the range of individual weapons. Small arms fire includes mortar fire and infantry anti tank fire

INFANTRY WEAPONS.

| Vickers 1 | MMG | UK | 250 | 450 | 700 |
| Brnng 303 | MMG | USA | 250 | 500 | 700 |
| Maxim | MMG | USSR | 250 | 550 | 700 |
| Fiat | MMG | Ita | 50 | 400 | 700 |
| Brnng . 5 | HMG | USA | belt |  | 800 |
| MG 42 | HMG | Ger | belt | 1200 | 800 |

Once you know that a particular target is in range, you must then determine the \% chance of killing the target and the number of men a rifle or machine gun can kill in 30 seconds.

The following table shows the number of kills a particular weapon can make per move. After that, there is a table showing the deductions from the \% chance to make a kill, and finally the table showing the \% chance of making a kill for different weapons at different ranges.

INFANTRY KILLS

| WEAPON | POSSIBLE |
| :--- | :--- |
| KiLLS |  |

DEDUCTIONS FROM \% CHANCE OF KILL ,

| CONDITION | \% DEDUCTION |
| :---: | :---: |
| Firer moving (on foot) | 50 |
| Target moving | 10 |
| Both moving | 65 |
| Target prone Heads down no fire | 25 |
| Target prone Heads up firing | 10 |
| Target in soft cover | 10 |
| Target in medium cover | 30 |
| Target in hard cover | 40 |
| Firer in moving vehicle with mounted gun | 20 |
| Target in moving vehicle over 350 yds | 353235 |
| Target in moving vehicle under 350 yd | 201510 |
|  | A SA SS |

Light, medium and heavy machine guns may not fire while on the move unless they are bolted to a vehicle.
\% CHANCE OF A KILL

| Range <br> Ras) <br> (mms) |
| :--- |

add 10\% for snipers
If, for example, one rifle is firing at a range of 210 mm . A rifle can kill a maximum of 2 men per move. It has a \% chance of kill at that range of $55 \%$. If the target is moving in the open, a deduction of $10 \%$ is made giving a final result of $45 \%$. Since it is possible for a rifle to kill twice during one move, the $\%$ dice are rolled twice. If the number on the dice is 45 or less, then the target has been killed.

If infantry fire is directed against soft skinned vehicles or the tyres of armour and semi armour, use the following tables to determine the outcome.

INFANTRY FIRE ON VEHICLES

| Weapon type | Number of | Damage Dice |
| :--- | ---: | ---: |
| Rifle | each type | 1 d 4 |
|  | 4 | 1 d 4 |
|  | 3 | 1 d 4 |
| MMG | 2 | 1 d 4 |
| HMG | 1 | 1 d 6 |

Infantry weapons cannot penetrate armour and may only do damage to tyres. All excess damage is disregarded.

If grenades are used against tracked vehicles, they can damage the tracks. 1 d 6 for damage to armour, 1 d 8 for damage to semi armour, and 1 d 10 for damage to soft skinned.

One man can throw one grenade per move. Grenades can be thrown a maximum of 40 mm . An ordinary grenade has a blast circle of 30 mm . This only applies to hand held grenades.

Rifle grenades are discussed under infantry anti tank. 50\% chance of survival in the open, $40 \%$ in a confined space.

## MORTAR FIRE

Mortar fire is done in the same way as artillery fire. Although there are no restrictions on when they can be used.

The effects on buildings and vehicles are the same as artillery. The table below shows different mortars and their capabilities.

MORTAR TABLE

|  |  |  | Range | Rounds |
| :---: | :---: | :---: | :---: | :---: |
| TYPE | ELEVATION | NAT | Min Max | per Move |
| 2 inch | 40-90 | UK100 | 500 | 4 |
| 3 inch | 45-80 | UK275 | 1600 | 9 |
| 45 mm | 45-85 | Italian/French | 585 | 12 |
| 50 mm | 45 or 70 | USSR | 900 | 15 |
| 50 mm gwf86 | 42-90 | German | 600 | 20 |
| 50 mm | 45 | Japanese | 700 | 12 |
| 60 mm |  |  | 1860 |  |
| 60 mm M2 | 45-80 | USA | 1985 | 18 |
| 81 mm M1 | 40-85 | USA | 3290 | 18 |

## INFANTRY ANTI-TANK

## 9.2

Below is a table describing other types of infantry anti tank weapons;

| Type | Range | Penetration | Date | NA | $\begin{aligned} & \mathrm{RP} \\ & \mathrm{M} . \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| PIAT | 100 | 100 | 1942 | UK | 1 |
| 2.36 " m1 | 300 | 80 | 1942 | USA | 2 |
| P/Faust 30k | 60 | 140 |  | German |  |
| P/faust 30 | 60 | 200 |  | German | 1 |
| P/faust 60 | 120 | 200 |  | German | 1 |
| P/faust 100 | 200 | 200 |  | German | 1 |
| P/faust 150 | 300 | 200 |  | German | 2 |
| Panzerschek | 100 | 300 |  | German | 2 |
| Rifle gren68 | 100 | 60 |  | UK | 1 |
| Rifle g/gross | 200 | 40 |  | German | 1 |
| Rifle g/klien | 200 | 40 |  | German | 1 |
| Rifle g/gew | 200 | 90 |  | German | 1 |
| Rifle g/ssgew | 400 | 125 |  | German | 1 |
| Magnetic mine | impact | 110 |  | German |  |

| Type | Range | Penetration | Date | NA | $\begin{aligned} & \mathrm{RP} \\ & \mathrm{M} . \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| AT grenade | crunch |  |  | UK |  |
| AT grenade | crunch | 75 |  | USSR |  |
| ATR boys 1 | 700 | 20 | 1937 | UK | 3 |
| ATR ptrd 41 | 700 | 25 | 1941 | USSR | 1 |
| ATR ptrs 41 | 700 | 25 | 1941 | USSR | 3 |
| Panzerbuche 38 | 500 | 25 |  | German | 1 |
| Panzerbuche 39 | 500 | 25 |  | German | 1 |
| PanzerbucheS18 | 500 | 35 |  | German | 5 |
| ATR 97 | 50 | 12 |  | Japanes | 3 |
| ATR w2/35 | 500 | 20 |  | Polish | 5 |

ATR - Anti tank rifle
All anti tank weapons are fired in the same manner as cannon except that ranging is automatic at a range of 150 mm or less. For targets over 150 mm , ranging must be done using the Anti-Tank Ranging Table.

| Damage dice |  |  |  |
| :--- | ---: | ---: | :---: |
| Weapon | Armour | Semi Armour | Soft Skinned |
| PIAT | 2 d 8 | 2 d 10 | 2 d 12 |
| ATR | 2 d 6 | 2 d 8 | 2 d 10 |
| Bazooka type | 2 d 10 | 2 d 12 | 3d10 |

The only major form of infantry weapon not covered so far is the flame thrower. The following rules govern the use of this weapon;

## FLAME THROWERS

1) The flame thrower (infantry) has a maximum of five shots before it is exhausted.
2) The maximum range for an infantry flame thrower is 100 mm .
3) Any infantry caught by a flame thrower are killed.
4) All soft skinned vehicles hit roll 4D12 for damage.
5) Semi armoured vehicles roll 3D10 for effect.
6) Armour rolls 1D10 for effect.
7) Flame throwers will clear one room of a building per shot.

Now we move on to Melee and morale. The morale tables include vehicle crews, gun crews and infantry.

To determine the outcome of hand to hand combat, each player rolls 1 six sided die and then adds the score to the appropriate score given by the following table.

## MELEE

| Condition | Infantry |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | German | UK | USA | USSR | Japanese | Italian | Other |
| Elite | +3 | +2 | +2 | +2 | +4 | +2 | +2 |
| Regular | +2 | +2 | +1 | +2 | +3 | +1 | +1 |
| Conscript | +2 | +1 | +1 |  |  |  |  |
| Surprised | -3 | -3 | -4 | -4 | -3 | -5 | -5 |
| Bayonet | +2 | +2 | +1 | +2 | +3 | +1 | +1 |
| Uphill-1 | -1 | -2 | -2 | -2 | -2 | -2 |  |
| Knife +3 | +2 | +2 | +2 | +2 | +1 | +2 |  |
| Downhill | +2 | +2 | +2 | +2 | +2 | +2 | +2 |
| 2 to 1 od | +4 | +4 | +3 | +3 | +3 | +3 | +3 |
| 3 to 1 od | +6 | +6 | +5 | +5 | +5 | +5 | +5 |

For each melee, a separate die roll must be made. ie. if two men attack one, then the player with two men will roll for each man attacking. If the defender kills the first attacker, he must then face the second as if it were a new attack.

The higher score will win, but if the scores are equal, then the defender wins.

## MORALE

Once you have determined how many men have been killed, you may need to take a morale test. Morale is an important factor and cannot be ignored. The following list gives the times a morale test MUST be taken;

1) When fired on for the first time.
2) When fired on from the flank or rear.
3) If an officer or N.C.O. is killed.
4) If under surprise attack.
5) If in melee.
6) If under shell or flame attack.
7) If outnumbered by 2 to 1 or more.
8) If friendly units in sight are retreating.
9) If $25 \%$ casualties in one move.
10) Infantry without AT weapons within 200 mm of enemy armour.
11) Vehicle has been immobilised.
12) Vehicle has been destroyed.
13) Friendly units withdrawing on flanks.

MORALE TABLE FOR INFANTRY

| Moving forward | +1 |
| :---: | :---: |
| Officer present | +2 |
| Friendly MG firing on enemy | +1 (not AFV) |
| Soft cover | +1 |
| Supported by armour | +2 |
| Medium cover | +2 |
| Hard cover | +3 |
| Artillery support | +2 |
| Deployed | +2 |
| conscript | -2 |
| Elite | +2 |
| Fanatics | +3 |
| Veteran | +1 |
| Poorly led | -1 |
| Up Hill from enemy | +1 |
| Each victory this game | +2 |
| Each man killed during game | -1 (each) |
| Each man killed this move | -1 (each) |
| Officer killed | -4 |
| Behind enemy lines | -3 |
| fired on from flank or rear | -2 |
| Under artillery/armoured fire | -3 |
| retreating | -2 |
| previous morale less than 0 | -3 |
| under flame attack | -3 |
| under rocket attack | -5 |
| under surprise/first fire | -2 |
| no radio | -1 |
| outnumbered | -2 |
| in melee | -3 |
| Friendly units withdrawing | -3 |
| Unsupported | -3 |
| Each battle lost this game | -2 |

If a units leader is killed, then two moves must elapse before another member can take command. The members of a section must be within 25 mm of each other to be considered a unit. A group of 10 men could be spread out over 250 mm and still be considered a unit. If any man gets beyond 250 mm away from a member of his unit, then he is considered no longer part of the unit and his morale factor drops by 10 points.

Messages may be passed by word of mouth from man to man at a rate of 100 mm per move. This only applies when men are within 50 mm of each other. The best idea is to keep the CO in the centre of a section if they are spread out as a message can be passed from the centre to the left and right far more quickly than it can be passed from one end of a line to the other.

You will need to write down the morale result and eventual morale score for each unit as this will be referred to on any following morale test.

MORALE RESULTS FOR INFANTRY

| Score | Result | Action |  |
| :---: | :--- | :--- | :---: |
| $\mathbf{- 2 0}$ \& less | If not in melee | Drop weapons and flee. |  |
|  | If in melee | Surrender. |  |
| $\mathbf{- 1 2}$ to-19 | Retreat to nearest friendly unit. <br> If unable to retreat surrender. | No return fire |  |
| $\mathbf{- 6}$ to-11 | If in the open | Fall back returning fire. |  |
|  | In cover | Heads down no fire for three <br> moves. |  |
| $-\mathbf{5}$ to-1 | Move to nearest cover | Return fire allowed |  |
| $\mathbf{0}$ to $\mathbf{9}$ | Follow orders. |  |  |
| $\mathbf{> 1 0}$ | If within 200 mm of enemy charge | otherwise follow orders |  |

MORALE TEST FOR VEHICLE AND FIELD GUN CREWS

| Officer or NCO present | +1 |
| :---: | :---: |
| Moving forward | +1 |
| Each friendly AFV in sight | +1 |
| Firing | +1 |
| Under shell fire | -2 (does not include AFV) |
| Under flame attack | -2 |
| Under small arms fire | -1 (does not include AFV) |
| Behind enemy lines | -1 |
| No radio contact | -2 (does not include USSR AFV) |
| Supported by artillery | +1 |
| Supported by AFVs | +2 (does not include AFV) |
| Each man killed last move | -1 |
| Fired on/ from flank or rear | -2 |
| Under first/surprise fire | -2 (from cannon) |
| Light damage to vehicle | -1 |
| Medium damage to vehicle | -2 |
| Severe damage to vehicle | -3 |
| Vehicle immobile | -5 |
| Unable to return fire | -2 |
| Each hit on vehicle | -2 |
| Vehicle destroyed | -10 |
| Commander killed | -4 |

Players roll 1 six sided die and add the score to the result of the figures given in the above tables.

## MORALE RESULTS FOR AFV AND FIELD GUN CREWS

| -15 and below | $:$ | Retreat at full speed until out of the battle <br> zone. If unable to retreat, surrender. |
| :--- | :--- | :--- |
| -6 to -14 | $:$ | Move to cover in reverse, infantry debus. Return <br> fire is allowed. If immobile evacuate. |
| 0 to -5 | $:$ | Move to cover. If immobile and not able to return <br> fire evacuate. |
| 1 to 4 | $:$ | Halt for one move. <br> 5 to 9 <br> 10 and above |
| $:$ | Follow orders. <br> If less that 200mm from enemy advance. Otherwise <br> follow orders. (does not apply to field guns) |  |

The final section of this chapter deals with infantry movement. The table below shows the distance that is achieved by infantry for differing conditions;

INFANTRY MOVEMENT

| Ground | Crawl | Swim | Walk | Run | Sprint | Retreat |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bicycle |  |  | 90 | 120 | 140 |  |
| Horseback | 20 | 50 | 120 | 150 | 150 |  |
| Paved | 20 |  | 45 | 90 | 120 | 130 |
| Soft | 20 |  | 40 | 80 | 100 | 120 |
| Ploughed | 20 |  | 35 | 70 | 80 | 110 |
| Mud/snow | 20 |  | 30 | 60 | 70 |  |
| Trench | 20 |  | 25 | 50 | 65 |  |
| River |  | 15 |  |  |  | 25 |
| Hill | 20 |  | 20 | 40 | 55 | 100 |
| Firing weapons |  |  | 25 |  |  |  |
| Desert | 20 |  | 20 | 40 | 55 | 100 |

Infantry carrying heavy machine guns, mortars, bazookas, rocket launchers, etc., cannot sprint. If infantry carrying these types of weapons, have to sprint, they MUST drop their weapons.
(Replace these figures with ones carrying only rifles or SMGs). Infantry movement is based on a man in full combat dress with kit and weapons. 80mm represents about 6.5 MPH. Infantry on foot could not be expected to cover more than 20 miles in a day.

## INFANTRY ORGANISATION

| Description. | Number of Men |
| :--- | ---: |
| Section | $8-12$ |
| Platoon | $32-48$ |
| Company | 120 |
| Battalion | $7000-8000$ |

(You should rarely exceed company strength in a game.)
ACTION \& REACTION TABLE

| Action/Reaction | Portion of move used |
| :---: | :---: |
| Set up LMG | 20\% |
| Set up MMG | 30\% |
| Set up HMG | 50\% |
| Set up mortar | 100\% |
| Guns | Limber Unlimber |
| $15-47 \mathrm{~mm}$ | 25\% 50\% |
| $48-75 \mathrm{~mm}$ | 50\% 75\% |
| $76-105 \mathrm{~mm}$ | 75\% 100\% |
| 106 mm < | 100\% 150\% |
| Secure a Building | 100\% (Per room) |
| Dismount from a Vehicle | 25\% |
| Mount on a Vehicle | 50\% |
| Cross a Fence or Hedge | 50\% |
| Cross Barbed Wire or Bocage | 75\% |

## WEATHER

The subject of weather does not often appear in wargames books, but this aspect was very important in fighting many campaigns. The Russian Front, Africa, D-Day were all influenced to a great extent by the prevailing weather conditions.

In the following tables, I have given a set of weather conditions for different theatres of the war. Following that, a key table which explains the symbols.

USSR \& EASTERN EUROPE

## EXPLANATION OF SYMBOLS.

A - Heavy rain. Visibility cut by $50 \%$. All planes grounded. Vehicles cut to half speed. Morale drops two points.
B - Light rain. Visibility cut by $30 \%$. All planes grounded. Vehicles cut speed by 25\%.
C - Cloudy. Visibility cut by $15 \%$.
D - Fine.
E - Sand storm. Visibility down by $80 \%$. All planes grounded. Men and vehicles move to cover.
F - Drought. Morale down by 4 points.
G - Snow storm. Visibility down by $80 \%$. All planes grounded. All vehicles halted. All men at walking speed.
H- Sleet. Visibility down $65 \%$. All planes grounded. Vehicles cut to half speed.
I- Fog. Visibility down $90 \%$. All planes grounded. Vehicles cut to half speed.
J - Mist. Visibility down by $50 \%$.
To find the weather conditions decide on which front the battle is taking place, then roll a six sided die. Refer to the appropriate Theatre Table then look up the meaning of the code.

To change weather conditions roll a six sided die every ten moves. If you get a 1,2, or 3 , then the weather condition moves to the right of the last weather condition. If you roll a 4,5 , or 6 then it moves to the left.

This chapter deals with areas that do not readily fit into a category and are not really worthy of a chapter of their own. It does contain some important information and should be looked at carefully.

## MINE FIELDS

A mine field takes a great deal of time to set up. For major mine fields, it is a good idea to map out the area by drawing a map before the game starts. If some scattered mines are laid, they should also be marked on the map.

Once enemy infantry or vehicles enter the mine field, roll the \% dice to determine if a mine has been set off. There is a $75 \%$ chance of setting mines for the first move in a mine field. Add $5 \%$ for each successive move. ie. If a vehicle enters a mine field and does not set off a mine, the chances of setting off a mine will increase each move by $5 \%$.

Men cannot set off anti-tank mines as they are set for a pressure greater than a soldier's weight. Anti personnel mines have a blast circle of 75 mm . Any men caught in that area have a $50 \%$ chance of survival.

If a semi armoured or soft skinned vehicle sets off an anti-tank mine it is destroyed and the crewmen are killed. If it hits an anti personnel mine, it will have its wheels/tracks damaged and will be immobilised.

If an armoured vehicle hits an anti tank mine it has a 60\% chance of being destroyed. If not destroyed, it becomes immobilised. Use your \% dice to determine the outcome.

Mine clearing can be done with flail tanks or by specials squads of sappers. Flail tanks can clear mine fields moving at half speed. A squad of five men can clear an area of 50 mm by 50 mm every two moves.

Laying mine fields is not feasible as it would take far too long in a game situation. Therefore when mines are used, you should draw a map before the game.

## VEHICLE MOVEMENT

Although vehicles differ in their performance, they are all similar in the fact that they cannot go from stationary to full speed in one move. It takes two moves to reach full speed and two moves to go from full speed to stationary.

## REVERSING VEHICLES

Reversing a vehicle cuts speed by $75 \%$ for wheeled, and $50 \%$ for tracked vehicles. Some vehicles had steering at both ends so this rule does not apply to them.

## ABANDONED VEHICLES

Although it may be true that both sides made extensive use of captured equipment during the war, the vehicles concerned were generally obtained after a battle and most needed extensive repairs before they could go back into action.

For the purpose of these rules, the only vehicles that can be captured and used are soft skinned or semi armoured vehicles which have been abandoned without being damaged.

Armoured vehicles are not reusable. In most cases tanks had self destruct charges fitted which the crew would ignite before bailing out.

If damage to a vehicle is light (ie, tyre damage), and the crew can return fire or could be reasonably assumed to be safer in the vehicle than out, they may remain in the vehicle as long as their morale holds out.

## STAR SHELLS \& SMOKE BOMBS

Star shells can be used to illuminate an area 200 mm x 200 mm during night operations. They remain effective for three moves.

The area they light up can be worked out by using the same firing procedure as artillery.
Smoke may be laid by artillery, smoke dischargers or grenades and is effected by weather in the following ways.

Sand storm / Snow storm / Heavy rain - smoke has no effect.
Light rain / Sleet - smoke lasts one move after laying.
Other conditions - smoke lasts 2 moves after laying.
The area covered by smoke is as follows :
$50 \mathrm{~mm} \times 25 \mathrm{~mm}$ for smoke dischargers and smoke grenades. $2 \times$ blast circle for artillery.

## CHANCE CARDS

You can also make up a series of chance cards. These can cover areas that the rules do not. ie. 'Air strikes on your supply depot have cut off all supply for ten moves', 'A stray mine brews up a vehicle closest to the front line' etc.

These cards can bring about misfortune or fortune for each player and add a new dimension to the game. You could select a chance card by rolling a six when rolling dice for movement and fire.

## PLACING DEMOLITION CHARGES

If during a battle one side needs to blow a bridge or some such structure then charges can be laid by sappers.

It takes two moves for two men to lay one charge and it takes three charges to demolish 100 mm of a structure. When the charges have been laid, there is a $75 \%$
chance of success. If 75 or less is not rolled by the percent dice on the first roll, then all the charges have to be re-laid.

If charges are to be removed, it takes three men one move to remove one charge.

## VEHICLES MOVING THROUGH WALLS

No soft skinned or semi armoured vehicle may attempt this. Armour may only crash through brick and wooden walls with the turret turned backwards to avoid damage to the cannon. Self propelled guns must reverse through.

## PLAYING GOD

A word needs to be said about the 'god like' position of the players in a wargame. Since players can see all that is occurring on a wargames table there is a tendency to move tanks away from bushes containing infantry with flame throwers or bazookas. This can be avoided by using markers and noting on paper what the markers represent. Once the marker is within visible range it can be replaced with the infantry squad or vehicle it represents.

More will be said about maps in a future chapter.

## VEHICLE COLLISIONS

On occasion, vehicles collided either by accident or by deliberate ramming. The following tables give the outcomes of such collisions;

Speed of Vehicle

| Weight <br> of <br> Vehicle <br> $\mathbf{0 - 5}$ <br> $\mathbf{0 - 5}$$\quad \mathbf{6 - 1 0}$ |
| :--- |
| $\mathbf{6 - 1 0}$ |

Soft skinned -10
Semi armour -5
Armour +5
If two vehicles collide, then they each must have their points worked out. The results are given in the table below;

```
5 and less : Vehicle U.S.
0 to -4 : Vehicle badly damaged. Cut to 25% speed.
```

1 to 5
: Vehicle damaged. Cut speed by $25 \%$.
6 and over : No damage. Vehicle remain stationary for two moves
If a damaged vehicle needs to be moved out of the way then it can be towed by any vehicle of a similar weight. It takes three moves to attach a towing line and it can be moved at a rate of 50 mm per move.

In the case of armour, damaged vehicles can be pushed out of the way by a tank of similar or greater weight at a rate of 50 mm per move.

## BRIDGE BUILDING

This is done by engineers and takes 5 moves for a single span demountable bridge and 20 moves for a pontoon bridge.

## POINT VALUES

In order to select two opposing sides of equal status or to give an attacker an advantage in a game, you can refer to the following tables which give points for men and vehicles. To use this section you must decide how many points each side can have at the start of the game. Each player can then select different groups of men and vehicles.

One player may decide to have a few heavy tanks which cost more in points, and another may decide to have a lot of light tanks which do not cost as much.

The vehicle points have been worked out on the basis of speed, armour, and armament. This does not take into account some features such as sloped armour but does give some representation of a vehicle's fighting ability.

The formula adds the vehicle's top speed to its maximum armour thickness and the size of its gun in MMs. This was then divided by two to keep the numbers manageable. If you come across vehicles that are not mentioned here, you can use this formula to work out the point values.

POINT VALUES FOR INFANTRY

| Pistol | $\mathbf{1}$ | Rifle | $\mathbf{2}$ | SMG | $\mathbf{3}$ |
| :---: | ---: | :---: | ---: | :---: | ---: |
| LMG | $\mathbf{4}$ | MMG | 5 | HMG | 6 |
| Bazooka | 6 | Flame | 6 | Mortar | 6 |
| Officer | 3 | NCO | 2 | Private | 1 |
| ATR | 4 | grenade | 1 | AT mine | 10 |

ie. A private with a rifle is worth 3 points, an officer with a pistol is worth 4 points and so on.

POINT VALUES FOR VEHICLES

| FRENCH |  |  |  |
| :--- | ---: | :--- | ---: |
| Renault ft17 | 14 | Hotchkiss h35 | 50 |

If you use point values to set up a battle, you can also use them to determine the outcome of a battle which may be in doubt.

If the game has come to an end and there is no clear victor, then you can add the points values for each side's losses during the game. Subtract 10 points for each 100 mm of ground gained since the start of the game. (If you loose ground then add 10 points for each 100 mm lost.) The winner is the side with the lowest number of points.

Field guns are based on 1 point per mm of barrel width. ie $75 \mathrm{~mm}=75$ points

## CAMPAIGN MAPS

If you intend to fight a lengthy campaign, it may be of some help to make a $10: 1$ scaled down map. This could comprise an area of $10 \times 10$ playing boards. If, for example, your playing board was 3 metres by 2 metres, a $10: 1$ scale map would be 300 mm by 200 mm . A number of these maps could be drawn side by side on a large piece of paper. You should make each map different and match up roads etc. between the different ones. Mark out on each maps, buildings, hills, rivers, roads etc. You can also include mine fields.

Use a series of markers to determine troop concentrations and select one of the board maps as the one to actually play on.

When one board has been set up, play can begin. Use the markers to move troops to and from the area of conflict. Remember that movement and fire on the campaign board is one tenth the range of that on the playing board.

The campaign map will alleviate the unrealistic aspect of vehicles and men appearing on the playing board from nowhere.

If two opposing forces meet on a campaign map (and you already have a game board set up with a battle in progress) you can use the same rules scaled down to 1:10. You can, in effect, have a full blown battle going on the campaign map and fight out a section of the battle on the playing board.

NOTE :
It is a good idea for the umpire to move some markers from each opposing force as well as some civilian markers on the campaign map. This could lead to a situation where strafing raids are made against civilian targets or even one's own troops, as was often the case.

## SUPPLY

The question of supply will effect most games that you play. If at the beginning of the game all men and vehicles are selected, then they can be moved at any time (except when using a campaign map).
If you are running low on men and vehicles then you may need to resupply your front line. You may request supplies every three moves. Supplies may not exceed 300 points (see points values) in any one move.
The question of whether supply will be available or not will depend on two things.

1) What side you are on and 2) what year it is.

If you are using a campaign map, then your supplies will reach the board by moving on the map. If you are not using a campaign map, then you must refer to the table on page 53.7 (?)

A request for supply may only be made in the following circumstances;

1) If all your forces are in retreat for more than two moves
2) If you have suffered more than $40 \%$ losses overall.
3) If you need a specific vehicle for a specific task. ie bridge layer.
4) If your attack has failed.
5) If the enemy is counter attacking.
6) If you have lost $25 \%$ or more of the territory you held at the start of the game.

The tables below will tell you whether your request for supply has been granted. Use \% dice.

| NORTH AFRICA |  |  |  |  |  |  |  |  |

\% chance of supply

If you are not using a campaign map then roll one six sided die to determine when supplies reach the board.

1-2 moves
2-4 moves

3-6 moves
4-7 moves
5-8 moves
6-9 moves

Supply may only be requested when the given conditions apply again.

## APPENDIX A

## MAJOR BATTLES

It may be of some use to know what dates battles began and ended. This will help in setting up a battle and selecting the types of vehicles to use.

North West Europe.

| Polish campaign | Sept 1 1939 - Sep 27 1939 |
| :--- | :--- |
| Finnish campaign | Nov 30 1939 - Feb 1940 |
| Invasion of Norway | Apr 9 1940 - Jun 1940 |
| Assault on France | May 10 1940 |
| Dunkirk | May 31 1940 |
| D Day | Jun 6 1944 |
| Arnhem | Sep 17 1944 |
| Battle of the Bulge | Dec 16 1944 |
| End in Europe | May 7 1945 |

| North Africa |  |
| :---: | :---: |
| Wavell's opening offensive | Dec 91940 |
| Ethiopian campaign | Jan 191941 - Nov 271941 |
| Rommel's first offensive | Feb 141941 - Mar 271941 |
| Operation Brevity | May 151941 |
| Operation Battleaxe | Jun 151941 - jun 171941 |
| Crusader battles | Nov 181941 - Dec 311941 |
| Rommel's drive to Gazala | Jan 211942 - Jun 181942 |
| Fall of Tobruk | Jun 211942 |
| German advance to El Alemein | Jun 261942 |
| El Alemein 1st battle | Jun 261942 |
| Alam Halfa | Sep 1 1942-Sep 41942 |
| El Alemein 2nd battle | Oct 241942 - Nov 41942 |
| Operation Torch | Nov 81942 - Dec 11942 |
| 8th army advance | Dec 121942 - Feb 141943 |
| Kasserine | Feb 141943 - Feb 251943 |
| Breaking the Mareth line | Mar 61943 - Apr 61943 |
| End in Africa | May 121943 |

Mediterranean

| Italian attack on Greece | Oct 28 1940 |
| :--- | :--- |
| Invasion of Yugoslavia | Apr 6 1941-Apr 17 1941 |
| German attack on Greece | Apr 6 1941-Apr 28 1941 |
| Attack on Crete | May 20 1941-May 30 1941 |
| Invasion of Sicily | Jun 10 1943 - Aug 17 1941 |
| First landings in Italy | Sep 3 1943 |
| Gustav line | Oct 12 1943-dec 27 1943 |
| Ensue | Jan 22 1944 |
| Gothic line | Oct 20 1944 |
| End in Italy | May 2 1945 |

The Russian front

| Barbarossa begins | Jun 22 1941 |
| :--- | :--- |
| The Finnish attacks | Jan 29 1941- Dec 6 1941 |
| Lenningrad | Sept 1 1941 |
| Moscow 1st battle | Sep 30 1941-Nov 29 1941 |
| Moscow 2nd battle | Dec 5 1941-Jan 5 1942 |
| End in Stalingrad | Jan 31 1942 |
| Kursk | July 5 1942 - Aug 23 1942 |
| End in Lenningrad | Jan 19 1944 |
| Fall of Berlin | Apr 16 1945 |

South East Asia

| Pearl harbour | Dec 7 1941 |
| :--- | :--- |
| Invasion of Malaya | Dec 8 1941-Jan 31 1942 |
| Fall of Hong Kong | Dec 8 1941-Dec 25 1941 |
| Fall of the Philippines | Dec 8 1941-May 6 1942 |
| Fall of Dutch east Indies | Jan 11 1942-Mar 8 1942 |
| Fall of Burma | Jan 15 1942-May 15 1942 |
| New Guinea | Jul 22 1942 |
| Guadalcanal | Aug 7 1942 |
| Solomons | Jul 2 1943 |
| Arakan | Feb 24 1943 |
| Chindit operations | Feb 8 1943-Aug 4 1943 |
| Marianas | Jul 9 1943 |
| Marshalls | Nov 20 1943 |
| Imphal | Mar 7 1944- Apr 7 1944 |
| Leyte gulf | Oct 20 1944 |
| Clearing the Philippines | Jan 9 1945 |
| Iwo Jima | Feb 19 1945 |
| Okinawa | Apr 1 1945 |
| Rangoon falls | May 3 1945 |
| End in the Pacific | Nov 1 1945 |

## APPENDIX B

## ABBREVIATIONS

| AT | Anti-tank |
| :--- | :--- |
| AC | Armoured car |
| AFV | Armoured fighting vehicle |
| AP | Armour piercing |
| ATR | Anti-tank rifle |
| LMG | Light machine gun |
| MMG | Medium machine gun |
| HMG | Heavy machine gun |
| US | Un-serviceable |
| FOO | Forward observation officer |
| NCO | Non commissioned officer |
| MPG | Miles per gallon |
| MPH | Miles per hour |
| RPM | Rounds per move |
| HE | High explosive |
| MMs | Millimetres |
| UK | United Kingdom |
| Ger | Germany |
| USSR | Russia |
| Ita | Italian |
| Jap | Japan |
| Aus | Australia |
| SMG | Sub machine gun |
| Yds | Yards |
| Pdr | Pounder |
| DD | Duplex drive (amphibious tank) |
| GMC | Gun motor carriage |
| HT | Half track |
| HQ | Head quarters |
| SPA | Self propelled artillery |
| SPG | Self propelled gun |
| KWK | Tank weapon |
| Pak | Anti-tank weapon |
| Flak | Anti-aircraft weapon |
|  |  |

## GLOSSARY

| Armour | Specially hardened metal. |
| :---: | :---: |
| Assault gun | A tank chassis minus the turret with |
|  | a superstructure to hold a larger gun. |
| Barrage | A large number of field gun firing at an area. |
| Bogie | Running wheel on an AFV. |
| Brewed up | Vehicle on fire and exploding. |
| Carbine | Small semi automatic rifle. |
| Char (French) | Tank |
| Debus | Passengers getting down from a vehicle. |
| Deployed | Combat ready troops. |
| Elevation | Vertical movement of a gun barrel. |
| Flail | Mine clearing device attached to a tank. |
| Howitzer | Gun which can fire only HE shells. |
| Immobilised | Vehicle which can no longer move. |
| Limbered | Field gun attached to its tractor. |
| Magazine | Chamber holding bullets. |
| Melee | Hand to hand combat. (Pron. MELAY) |
| Morale | Overall mood of the troops. |
| Panzer (German) | Tank |
| Range | Distance between a gun and it's target. |
| Semi armour | Vehicles which are not fully armoured. |
| Soft skinned | Vehicles with no armour. |
| Spaced armour | Sheets of armour mounted on struts which protect the tank. |
| Traverse | Horizontal movement of a gun barrel. |
| Turret | Armoured box on top of a tank which can traverse. |

## ADDENDUM

## AIR ATTACKS.

It is important to include a section on air attacks in this book as strikes against ground forces played an important role in many battles in all theatres of the war.

In this section we shall not discuss plane vs plane warfare as this is fraught with difficulties and is far too complex to include in what is basically a ground warfare book.

We shall deal instead with air vs ground attacks and although the rules have to be simple, I hope they will be fairly realistic.

The main difficulty in dealing with air attacks is the speed of the plane itself. If you convert our scale of $12 \mathrm{~mm}=1 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. to the average attack speed of a plane (approx. 300 m.p.h.) you end up with a move of 3.60 metres. This is far longer than the average wargames board which at six feet is just about half this distance.
Dealing with the aircraft first we have to set a speed of one board length or width per move. Assuming the board is six feet long and four feet wide. If the plane attacks down the board, the attack move will cover the whole length of the board. Because the single attack move of a plane would exceed the length or width of almost any games board, this has been found to be the most practical way of dealing with the situation.
You will need at least one 12 sided die to operate these rules. Two six sided dice will not work as the odds are considerably changed.

The player using the plane must select a point of entry on the board for the plane and it must then fly in a straight line across the board to the exit point. The plane may enter the board at a corner or edge and fly across diagonally in a straight line, although as you will see it may move up and down vertically.
There will be 12 points across the board which will be represented by twelve rolls of the die.

Because playing surfaces will wary in size, the best way to do this is to measure the length of the attack run and divide it by 12.
The player controlling the air attack then uses the 'AIRCRAFT ATTCK RUN TABLE' (below) to mark out his plane's flight path across the board. There are some basic rules to follow for flight paths and these are as follows :

1) A plane may not raise or drop more than one vertical box for every horizontal box moved.
2) A plane may no drop bombs below altitude 7 .
3) A plane may not fire rockets above altitude 9 .
4) A plane may not use cannon or machine guns above altitude 7 .

If both sides call in an air strike in the same move, then both planes attack each other and the strafing round is lost for both sides.

CALL AN AIR STRIKE (\% chance)

| Year | Axis | Allied |
| :--- | ---: | ---: |
| 1939 | 75 | 20 |
| 1940 | 85 | 25 |
| 1941 | 90 | 30 |
|  |  | 80 |
| 1942 | 65 | 40 |
|  |  | 30 |
| 1944 | 15 | 55 |
|  |  | 70 |
|  |  | 546 |

AIRCRAFT ATTACK RUN TABLE.

|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 |  |  |  |  |  |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |  |  |  |  |  |
| 6 |  |  |  |  |  |  |  |  |  |  |  |  |
| 7 |  |  |  |  |  |  |  |  |  |  |  |  |
| 8 |  |  |  |  |  |  |  |  |  |  |  |  |
| 9 |  |  |  |  |  |  |  |  |  |  |  |  |
| 10 |  |  |  |  |  |  |  |  |  |  |  |  |
| 11 |  |  |  |  |  |  |  |  |  |  |  |  |
| 12 |  |  |  |  |  |  |  |  |  |  |  |  |

Once the player controlling the aircraft has marked out the flight plan, the player controlling the ground forces under attack marks out a similar plan which show where any anti aircraft guns are firing.

See the examples below :
AIRCRAFT ATTACK RUN TABLE.

|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 |  |  |  |  |  |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |  |  |  |  |  |
| 6 | X |  |  |  |  |  |  |  |  |  |  |  |
| 7 |  | Xb |  |  |  |  |  |  |  |  |  |  |
| 8 |  |  | X |  |  |  |  |  |  |  |  |  |
| 9 |  |  |  | X |  |  |  |  |  |  |  | X |
| 10 |  |  |  |  | Xr |  |  |  |  |  | X |  |
| 11 |  |  |  |  |  | Xm |  |  |  | X |  |  |
| 12 |  |  |  |  |  |  | Xm | Xm | X |  |  |  |

As you can see from the flight plan, the aeroplane enters the board at altitude 6, drops one box and releases it's bomb(s), drops a further two boxes, and fires it's rockets, and then uses it's machine guns to strafe for three boxes. Then finally climbs away again.

Presuming the following anti aircraft weapons are available :
$1 \times$ quad 20 mm AA mounts. (6 round per move each)
$1 \times 3.5$ inch AA Gun. (3 rounds per move)
As you can see the tables are split into 3 main segments. As most guns have a rate of fire which is divisible by 3 , it is simple to work out where the shots will be placed.

For each segment the ground force commander rolls 1d12 to get the shot locations for each round from each AA gun firing.

IE:

| GUN | SEGMENT |  |  |
| :--- | :--- | :--- | :--- |
|  | 1 | 2 | 3 |
| 20 mm | $2 / 12$ | $2 / 3$ | $1 / 8$ |
| 20 mm | $3 / 8$ | $10 / 11$ | $1 / 12$ |
| 20 mm | $3 / 3$ | $2 / 4$ | $7 / 7$ |
| 20 mm | $5 / 7$ | $2 / 4$ | $2 / 5$ |
| 3.5 in | 10 | 6 | 7 |

You will note that as the 20 mm has a rate of fire of 6 , it gets 2 shots per segment instead of 1.

69

|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |  |  |  |  | A |  | A |
| 2 |  | A |  |  |  | A | A | A |  |  | A |  |
| 3 | A | A | A |  |  |  | A |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |  |  |  |  |
| 5 |  |  |  | A |  |  |  |  |  |  |  | A |
| 6 |  |  |  |  |  | A | A |  |  |  |  |  |
| 7 | A |  |  |  |  |  |  |  |  | A | A | A |
| 8 |  | A |  |  |  |  |  |  | A |  |  |  |
| 9 |  |  |  |  |  |  |  |  |  |  |  |  |
| 10 |  |  | A |  |  | A |  |  |  |  |  |  |
| 11 |  |  |  |  |  |  | A |  |  |  |  |  |
| 12 |  |  | A |  |  |  |  |  |  | A |  |  |

The dice roll will determine the altitude of each shot, but the player controlling AA fire may chose which of the 4 boxes across in each fire segment, the shot will explode.

Now the two sheets are compared to see if there was any damage to the aircraft.

|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |  |  |  |  | A |  | A |
| 2 |  | A |  |  |  | A | A | A |  |  | A |  |
| 3 | A | A | A |  |  |  | A |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |  |  |  |  |
| 5 |  |  |  | A |  |  |  |  |  |  |  | A |
| 6 | X |  |  |  |  | A | A |  |  |  |  |  |
| 7 | A | X |  |  |  |  |  |  |  | A | A | A |
| 8 |  | A | X |  |  |  |  |  | A |  |  |  |
| 9 |  |  |  | $\mathbf{X}$ |  |  |  |  |  |  |  | X |
| 10 |  |  | A |  | $\mathbf{X}$ | A |  |  |  |  | X |  |
| 11 |  |  |  |  |  | X | A |  |  | $\mathbf{X}$ |  |  |
| 12 |  |  | A |  |  |  | $\mathbf{X}$ | $\mathbf{X}$ | $\mathbf{X}$ | A |  |  |

As you can see, several AA shots went close to their targets, but none actually attained a hit.

## BOMBS

To determine where bombs fall roll 1 six sided die. The number rolled determines the point of impact from the bomb's release point.. le, if a bomb is released in section 3 and a four is rolled on the die then the bomb will fall in section 7 . The length of each section is 100 mm so an air attack covers 1200 mm from beginning to end but only part of this will be the actual target area.

## Bombs.

Damage area 100 mm long by 50 mm wide.
Bombs will destroy all targets within the damage area. Infantry must be dealt with as a high calibre ( 155 mm ) artillery weapon.
It is not always safe to drop bombs when diving in an attack. Take attack plan 8 as an example. If a bomb is released at position 1, it's possible striking points are $2,3,4,5,6,7$. You will note that the plane is flying very close to the ground at sections 5,6 and 7 . So that, if you were to roll a 4,5 or 6 , the plane could be caught in the blast of the bomb.

Although the plane travels faster than the bomb, the blast of the explosion could cause the plane some damage or may even cause it to crash. If the plane drops bombs and is flying on the flat above the bombs, roll 1 six sided die. 1,2,3, or 4 has no effect, 5 means the plane is damaged and must withdraw, 6 means it crashes 500 mm ahead.

## AIR TO GROUND ROCKETS

Rocket fire is done in the same manner as bombs except the six sided die roll is used in the following way;

A roll of 1 or 2 means one section ahead.
A roll of 3 or 4 means two sections ahead.
A roll of 5 or 6 means three sections ahead.
Rockets may only be fired on a downward run and cannot be fired below 10 on the vertical scale.

Rockets destroy any vehicle target. Any building hit is deemed severely damaged and on fire. Deal with infantry and buildings the same as a 105 mm artillery weapon.
The area of effect is $100 \mathrm{~mm} \times 40 \mathrm{~mm}$.

## AIRCRAFT CANNON

Aircraft cannons may be fired one vertical level above 12 and on the flat. T following die rolls apply.

12 or 3 causes hits to fall one section in front.
45 or 6 causes hits to fall two sections in front.
Aircraft cannons destroy all soft vehicle targets. Immobilise all hard vehicle targets. Infantry and buildings are to be dealt with as 75 mm artillery weapons. Aircraft cannons strike an area 75 mm each side of the attack line.

The area of effect is $100 \mathrm{~mm} \times 30 \mathrm{~mm}$.

## MACHINE GUNS

Machine guns may only be used on the flat part of the attack run and always strike one section ahead of where they are fired.

Machine guns are dealt with under the ordinary rules at a range of between 300 and 400 yards. Remember most planes had several machine guns which, for these rules, are considered heavy machine guns. Machine guns strike an area $100 \mathrm{~mm} \times 20 \mathrm{~mm}$.

## ANTI AIRCRAFT FIRE

Return fire from the ground.
Although it may be the case that a lucky shot from small arms occasionally brought down a plane, we will discount all small arms under the level of heavy machine guns. And even heavy machine guns must be mounted as specific anti aircraft guns. A machine gunner picking up a heavy machine gun and firing it at a plane (if at all physically possible) would be much more of a danger to his companions than the pilot of the plane.
If you have anti aircraft guns like the German quad 20 mm , each barrel is counted as a separate weapon and can be rolled individually. ie. If each barrel has six shots, then the total die rolls will be twenty four.
Quad machine gun mountings count as one shot per gun. Remember range limits apply so check this with the appropriate tables.

## EFFECT OF HITS ON AN AIRCRAFT

When a hit has been recorded the following rules apply.
Roll 1 six sided die.

## Machine guns.

1.2.3. No effect
4. $\quad$ Hits on plane puncture oil line. Only two more attacks may be made before the plane must withdraw.
5. Severe damage. Withdraw plane from combat.
6. Pilot killed. plane crashes 500 mm ahead.

## 20-40 mm AA guns

1.2. No effect.
3.4. Hits on plane force it to withdraw from combat.
5.6. Plane engine knocked out plane crashes off board.

41 mm and above AA guns
1 No effect.
2.3. Hits on plane force it to withdraw.
4.5.6. Plane explodes, wreckage falls over a 400 mm diameter 500 mm ahead.

## PARATROOP DROPS

Set coordinates as you would do for artillery then roll the \% dice as follows.
0-20 200 mm undershot
21-40 $\quad 200 \mathrm{~mm}$ overshot
41-60 200 mm left
61-80 $\quad 200 \mathrm{~mm}$ right
81-99 on target
Use an artillery blast sheet to determine where troops land. Paratroops dropping into;

| Rivers | - drown |
| :--- | :--- |
| On buildings | $-50 \%$ chance of injury |
| Trees | $-20 \%$ chance of injury |

When they land they take 1 move to remove chutes etc. and cannot fire during this time.

## DAMAGE TABLES

Damage tables are used to record all hits on vehicles and buildings. Each row on a vehicle damage table represents one vehicle.
To find out how much damage has been done to a particular vehicle the person firing rolls a specified number of damage dice which are defined in the various tables. The resulting number is then marked off on the damage table and any resulting damage to the vehicle must be immediately taken into account.

## DAMAGE EXPLANATION

Tracks - as each of the double lines is reached more damage is done to the vehicles tracks / wheels and there is a corresponding loss of speed. This is $-25 \%,-50 \%$ and $-99 \%$. No Crew are killed in the track damage section. If the weapon firing can penetrate the armour of the vehicle hit then if all track boxes are full the damage continues into the engine. If the weapon firing cannot penetrate then the additional damage is disregarded.

At the foot of the damage table there is a section showing the number of moves it takes to repair damage. In some cases damage can only be repaired by engineers or replaced parts must be acquired from a field workshop.

As you can see there are different sections for vehicle damage and crew casualties. If there is less than 5 crew then use crew casualties are moved across to the right. Ie. If there are only 2 crew then crew casualties only take place when the loader and commander are hit.

The Section headed AMO is used to determine if the vehicles ammunition explodes.

The semi armour / soft skinned damage tables include passenger casualties in the carrying compartment so don't forget to mark off boxes in thee Infantry Damage Sheet as well.

## INFANTRY DAMAGE SHEETS

The infantry damage sheet shows casualties for each section. Sections are used 4 per platoon. Each time a section is hit and casualties are taken mark them off left to right.

## BUILDING DAMAGE SHEETS

Each of these structures has a surrounding coating of boxes. Once high explosive fire breaks through this protective layer the occupants are rolled for under the ARTILLERY vs INFANTRY table which is found under the chapter on artillery fire.

Damage tables are located at the end on this book

## THE DAMAGE TABLES

The following pages are the damage tables referred to in this manual.

Used to record damage to brick buildings

Used to record damage to bridges.
The size of the bridge and it's construction will determine how many bridge sections are selected.

As with all damage sheets you are encouraged to make up your own versions to suit the game you are playing.

PILLBOX DAMAGE SHEET

Used for wooden buildings.

```
R - Rifle S - Sub Machine Gun L - Light Machine Gun
M - Mortar O - Mortar loader
F - Flame thrower
B - Bazooka H - Heavy Machine Gun A - Radio
P - Pistol (Officer)
```

## NOTES

## MOVEMENT

There is no doubt that some people will think the movement and fire sequence rules are tiresome and difficult. It is impossible in a turn based game to accurately simulate a real time battle but the system of movement and fire was developed to get as close as possible to reality.

If you are looking to speed things up then you can use a simpler method such as:
The winner of the move dice roll decides if they want to fire first or second and then:
Side A moves all vehicles and men simultaneously with side B
Side A fires
Side B fires with any units knocked out returning fire at 50\% normal rate.
This is much less realistic as ranges on moving vehicles can change dramatically but it is slightly offset by the fact that vehicles then must lose some movement for each round they fire. le. $1 / 3$ of total rate of fire means a deduction of $1 / 3$ of normal movement etc.

A difficulty arises when a concealed anti tank weapon fires on a vehicle that is moving towards it. If fire is done at the end on all movement then the vehicle is closer for all shots instead of gradually getting closer as it comes under fire. The only way to handle this is to use the ranging table for each shot and change range as the vehicle gets closer each $1 / 3$ of a move.

An example is probably needed here to clarify this:
Example:
A tank is 500 mm from an anti tank gun at the start of a move and is moving (more or less) directly towards it. The tank has a maximum move of 330 mm .

The AT gun will fire at its full rate (3 shots).
The vehicles maximum move is divided by 3 and the resulting figure deducted from the starting range each time the AT gun fires.

Shot 1 is calculated at $500 \mathrm{~mm}-110 \mathrm{~mm}=390 \mathrm{~mm}$
Shot 2 is calculated at $390 \mathrm{~mm}-110 \mathrm{~mm}=280 \mathrm{~mm}$
Shot 2 is calculated at $280 \mathrm{~mm}-110 \mathrm{~mm}=170 \mathrm{~mm}$

TANK \& ANTI-TANK FIRE
Although the rules for tank fire are as realistic as I have been able to make them I do realise that some people are going to be a bit put off by the calculations of angle of impact and the sine of the vehicle size. If you want to you can simplify these rules (I encourage people to modify any rules to get better game play).

One way of doing this that would make it fairly easy is to include a Side and Front/Rear size measurement in the vehicle specification tables. This is simply the length $x$ height for the side or width $x$ height for the front or rear. This would be less realistic but will make things easier for game play.

I still suggest you deduct appropriate amounts for the angle of impact as this was a crucial factor in the ability of AP shot to penetrate. Using a simple protractor accomplishes that with a minimum of fuss.

## SCALE

The more astute players will notice that the scale of $1 \mathrm{~mm}=1$ yard makes $1 / 76^{\text {th }}$ and $1 / 72^{\text {nd }}$ scale miniatures positively huge. If you use this scale of miniatures (and they are certainly the most pleasing to build and paint) then you have to ignore certain inconsistencies of scale.

The rules are really intended for use with $1 / 300^{\text {th }}$ scale miniatures and operate very well at that size.
